Sequence 35, Application US/09010641

Patent No. 6121023

GENERAL INFORMATION:
APPLICANT: ROWANNO, JOSEPH W.
APPLICANT: WILLIAMS, KIMBERLY G.
TITLE OF INVERTION: THE DETECTION AND QUANTIFICATION OF CHEMOKINES RANTES,
TITLE OF INVERTION: THE DETECTION AND QUANTIFICATION OF CHEMOKINES PARTES,
TITLE OF INVERTION: MIP-1APHA AND MIP-1BETA
MUMBER OF SEQUENCES: 45

                                                                                                                                                                                                                                                                                     ORGANISM: human; serum infectious for PT-NANBH INMEDIATE SOURCE:
LIBRARY: cDNA clones from 3' end of the genome
                                                                                                                   SEQUENCE CHARACTERISTICS:
LENGTH: 3750 base pairs
TYPE: nuclectide with corresponding protein
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       OPERATING SYSTEM: Windows

Sequence 160, Application US/08361527
Patent No. 6420135
GENERAL INFORMATION:
TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences
STREST: 4010 Key West Avenue
CITTS: ROCKVILLE
COUNTY: USA
ZIP: AND KEY WEST Avenue
COUNTY: USA
ZIP: ASADABLE PORM:
MEDION TYPE: Diskette, 3.50 inch, 1.4Mb storage
COMPUTER: HE Vectra 466/33
CORPUTER: HE VECTRA 466/33
COUNTY APPLICATION DATA:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                              The present invention relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quancher or/and a fluorophore and a photodetector. The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribozyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /*tag= c

The present invention relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a fluorophore and a photodetector. The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is substrate of a ribozyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ត
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invertion relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a fluorophore and a photodetector. The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to detectine the concentration of a particular ion in a solution. The present sequence is a ribozyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid enzyme biosensors, useful for the sensitive and selective detection of lons, particularly metal fons e.g. lead fons, and for determining the concentration of a particular ion in a solution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            88

The present invention relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a fluorophore and a photodetector. The biosensors are useful for the sensitive and selection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribozyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                               New mucheic acid enzyme biosensors, useful for the sensitive and selective detection of ions, particularly metal ions e.g. lead ions, and for determining the concentration of a particular ion in a solution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid ensyme biosensors, useful for the sensitive and selective detection of ions, particularly metal ions e.g. lead ions, and for determining the concentration of a particular ion in a solution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Biosensor; ion detection; lead; zinc; cobalt; nucleic acid enzyme; quencher; fluorophore; photodetector; ion concentration; ribozyme; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to blosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a fluorophore and a photodetector. The blosensors are useful for the sensitive and selective detection of ions. The blosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The blosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribosyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid enzyme biosensors, useful for the sensitive and selective detection of ions, particularly metal ions e.g. lead ions, and for determining the concentration of a particular ion in a solution.
                                                                                                                                                                                                                                           Biosensor; ion detection; lead; zinc; cobalt; nucleic acid enzyme; quencher; fluorophore; photodetector; ion concentration; ribozyme; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Biosensor; ion detection; lead; zinc; cobalt; nucleic acid enzyme; quencher; fluorophore; photodetector; ion concentration; ribozyme; ss.

                                                                 enryme dependent on an ion to produce a product, a quencher or/and a fluorophore and a phocodetector. The biosensors are useful for the senaitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribosyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a Eluorophore and a photodetector. The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a riboryme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid enzyme biosensors, useful for the sensitive and selective detection of ions, particularly metal ions e.g. lead ions, and for determining the concentration of a particular ion in a solution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Biosensor; ion detection; lead; zinc; cobalt; nucleic acid enzyme; quencher; fluorophore; photodetector; ion concentration; ribozyme; ss.

The present invention relates to biallelic markers derived from human genes involved in central nervous system (CMS) disorders. The present sequence is one such biallelic marker derived from human GABA-A receptor subunit (GABRG2) gene. GABA is gamma aminobutyric acid. This marker has a single nucleotide polymorphism (SNP) and is useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set of genetic markers in a biological sample, where the markers comprise at least one CNS disorder related marker
                                                                                                                                                                                                                                                                                                                                   Single nucleotide polymorphism; SNP; biallelic marker; human; ds; central nervous system disorder; CNS; GABRG2; GABA-A receptor subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated polymucleotides, useful for genotyping mucleic acids for biallelic markers for the diagnosis of depression, comprises central nervous system disorder related biallelic marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /*teg= a

```
The present invention provides a nucleic acid capable of controlling the expression of a gene and being activated by an Bis-transcription factor (BLF) related compound. The nucleic acid is useful for screening and/or providing candidate compounds capable of regulating transcription. This is involves bringing the nucleic acid into contact with compounds to be corrected and desecting the transcriptional activity from the nucleic acid into contact with compounds to be contained and detecting the transcriptional activity from the nucleic and/or synchesising the positively tested compound. A construct of containing the sequence of the oppound and optionally purifying and/or synchesising the positively tested compound. A construct of containing the sequence is useful for activating the expression of a gene containing the sequence is useful for activating the expression of a containing the control, such as the utrophin gene, interleukin (IL)-2 gene, acetylcholine receptor (AchR) delta and epsilon submits gene or acetylcholine receptor (AchR) delta and epsilon submits genes, for the treatment of muscle diseases, preferably Duchenne or Becker muscular sequence is the coding sequence of a fusion protein of the human GABP containing type I VP16
Human; utrophin B; promoter; Bts-transcription factor; transactivator; muscular distributar distributar distributar distributar distributar distributar gene therapy; muscle wasting; cytostatic; immunostimulant; haemostatic; haemophilis; immune deficiency; cancer; HSVI, VP16; GABP bets; ds;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acid capable of controlling the expression of a gene and being activated by an Ets-transcription factor related compound, useful for screening candidate compounds capable of regulating transcription.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1248 BP; 336 A; 285 C; 340 G; 287 T; 0 U; 0 Other;

A cis-regulatory element required for virion associated protein VP16 madiated induction of herpes simplex virus 1 (HSV1) immediate early (IE) genes consists of three imperfect repeats of the purine-rich interaction of the imperfect repeats of the purine-rich interaction with the purine-rich repeats of xepeats) has been identified in soluble preparations of rat liver nucleif. This GA binding protein (GAB) consists of two separable schunits. Applicants have isolated CDNA clones encoding both subunits of GABP and have revealed that one (GABP alpha) is related to the Ets transforming protein, while the other (GABP obeta) contains a series of 33-amino acid repeats related in sequence to variety of proteins. The sequences for GABP-beta-1 and GABP-beta-2 are identical up to nucleotide lillo except for a three nuclaocide innertion (GTA) at posm. 828 of GABP-beta-1. (Updated on 25-MAR-2003 to correct PN

(GTA) at posn. 828 of GABP-beta-1. (Updated on 25-MAR field.) (Updated on 25-WAR-2003 to correct PI field.)

DNA encoding GA binding protein sub-unit - allows investigation of sub-unit sequence motif functions, for control of rapid cell division e.g. in cancer.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also chaimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a differentially expressed in neuronal tissue of a first animal that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition of activity in an animal of one or more of the polypeptides or their animal of one or more of the polypeptides or their animal composition comprishing the one or more of polypeptides or their animal composition comprishing the one or more of polypeptides or their animal composition comprishing the one or more of the polypeptides or their animal composition comprishing the one or more of the parameterization which encodes one of the polypeptides of the invention that the appendence presented during pain. Note: The sequence data for this patent did not form part of the printed specification, but was for the printed specification, but which is differentially expressed during pain. Note: The sequence data for the printed specification, but which is differentially expressed during pain. Note: The sequence during pain or the sequence data for the printed specification, but which is differentially expressed during pain.
                                                                                       New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises the amino acid and coding sequences of proteins involved in the control of flowering time in rice. The DNA and protein sequences of the invention are useful for modulating flower architecture and flowering time, the DNA and protein sequences are useful in the area of plant biotechnology, commercial plant farming and agriculture. The present wheat DNA sequence shows homology to the rice sequences of the

a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or acres second Bacillus cells. The method is useful for monitoring Global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring danages in expression of genes may be used to provide a representation of the way in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, or up characterisation is unnecessary, when one spot on an array equals one control or or one open reading frame, since sequence information is available. This sequence represents a genomic sequence did not form to the firwention. Note: The sequence data for this patent did not form to part of the printed specification, but was obtained in electronic format verver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New breast specific nucleic acids and proteins, useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer and non-cancerous disease states in breast tissue, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides human breast specific coding sequences and proteins. These can be used in the diagnosis and treatment of breast cancer and non-cancerous diseases of the breast. The present sequence is a coding sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, breast specific gene, breast specific protein, breast cancer, gene therapy, cytostatic, gene, ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human breast cancer associated coding sequence SEQ ID NO: 103.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ch 60.64; Score 20; DB 6; Length 1018; 1 Similarity 82.11; Pred. The present invention relates to a new method of producing a vector. The method involves introducing recombinant vector having nucleotide sequence (18) having 5 and 3 end, left and right inversed terminal repeats of adenovirus lanking NS, adenovirus packaging sequence linked to inverted terminal repeat, and adeno-associated virus terminal repeat of inverted terminal repeat and adeno-associated virus terminal repeat linked to 3' end oil Luring cell to produce another vector. The method is useful for generating vectors applications (e.g. gene therest into a cell, for gene transferring nucleotide sequences of interest into a cell, for gene transferring nucleotide sequences of interest into a cell, for gene transferring nucleotide sequences of interest into a cell, for gene transferring sectored sequences are useful for treating diseases associated with it, i.e. adenosine deaminase gene associated with adenosine deaminase deficiency with severe combined immune deficiency, beta-chain of the medical phypercholesterolaemia, hypoxonthine-quanine themporibootyltransferase associated with Lessch-Nyhan syndroms, phenylalanine hydroxylase (PAR) gene associated with phenylatomuria, dystrophin gene associated with muscular dystrophy, and human cystic fibrosis transmenhrane conductance requence represents a human adenovirus genome sequence that was used in the methods of the invention
                                                                                                                                                       Producing vector, by introducing vector having nucleotide sequence, adenovirus inverted terminal repeats and packaging sequence, and adenoassociated virus terminal repeat, into cell, and culturing cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Biosensor, ion detection, lead; zinc, cobalt; nucleic acid enzyme, quencher; fluorophore, photodetector; ion concentration, ribozyme, 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 34214 BP; 8509 A; 8969 C; 8556 G; 8180 T; 0 U; 0 Other;

                                                                                                                 The present invention relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a fluorophore and a photodetector. The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribozyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophile. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLiG176-ABLJ0511), expressed DNA sequences (ABLiG176-ABLJ0511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic formst directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                         Gaps
               New nucleic acid enzyme biosensors, useful for the sensitive and absective detection of ions, particularly metal ions e.g. lead ions, for determining the concentration of a particular ion in a solution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drosophila, devalopmental biology; cell signalling; insecticide; pharmaceutical; gene; ds.
                                                                                                                                                                                                                                                                                                                                                           ö

This invention describes novel oligonucleotides which are used for detecting the chemokines RANTES (regulated upon activation normal T expressed and secreted), macrophage inflammatory protein (MIP)-1 alpha or MIP-1 beta by (a) obtaining a sample possible containing RANTES or MIP-1 beta by (a) obtaining a sample possible containing RANTES or MIP-1 alpha or MIP-1 beta RAN, (b) performing an isothermal transcriptional amplification on the sample with 2 oligonucleotide primers, (c) detecting the product of step (b) where detection of a product indicates the product of RANTES MIP-1 alpha or MIP-1 beta in the sample. The assay is used to determine the levels of the chemokines RANTES, MIP-1 alpha and to be inhibitors of CO+ T-cells by primary non-syncytium-inducing HIV-1 to be inhibitors of CO+ T-cells by primary non-syncytium-inducing HIV-1 or stains. Thus the level of expression of these genes can be used as prognostic markers for direct therapeutic management of HIV-infected patients. By being isothermic, the assay requires less manipulation by the experimenter. Also 'spiking' the sample with a known amount of control RAN allowe quantitation and qualification of the products in a method of the invention
                                                                                                                                               RANTES; chemokine; detection; primer; probe; amplification; MIP-: alpha; regulated upon activation normal T expressed and secreted; MIP-1 beta; macrophage inflammatory protein; CD4 T-cell; inhibitor; prognosis; primary non-syncytium-inducing HIV-1 strain; therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detection of expression levels of the cytokines RANTES, MIP-lalpha and MIP-lbeta used as prognostic markers of HIV-infected patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ( Match 57.0%; Score 18.8; DB 2; Length 50; Local Similarity 76.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental blology and in elucidating cell signalling and inserecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABList76-ABList31), expressed DNA sequences (ABList76-ABList31), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

The present invention relates to biosensors, comprising a nucleic acid enzyme dependent on an ion to produce a product, a quencher or/and a fluorophore and a photoderector. The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribozyme which may be used as a biosensor of the invention
                                                                                                                                                                                                                                                                                             New nucleic acid enzyme biosensors, useful for the sensitive and selective detection of ions, particularly metal ions e.g. lead ions, and for determining the concentration of a particular ion in a solution.

The invention describes a method of monitoring differential expression of genes in a first Bacillus cells relative to expression of the genes in other Bacillus cells, comprising hybridiaing labelled nucleic acid probes is other Bacillus cells comprising hybridiaing labelled nucleic acid probes isolated from Bacillus cells con a substrate containing array of Bacillus general carray and determining relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells. The method is useful for a spot in the array. The method is useful for conitoring can one or more second Bacillus cells. The method is useful for conitoring gene copy number variation and stability. Monitoring changes in one or more second Bacillus cells. The method is useful discovaring new genes; identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in which Bacillus cells adapt to changes in culture conditions, or which Bacillus cells adapt to changes in culture conditions, culture carriaction is unnecessary, when one spot and a rarray equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence timformation is available. This sequence represents a genomic sequence the partner of the printed specification, but was obtained in electronic formation is enter of the printed specification, but was obtained in electronic formation is recovery.
                                                                                                 Monitoring differential expression of several genes in first Bacillus cell relative to expression of same genes in one or more second Bacillus cells, by using substrate containing Bacillus genomic sequenced tag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Saps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                  New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease registance, useful for conferring resistance or tolerance to a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease resistance; pathogen tolerance; plant pathogen; ds; gene; plant;
                                                                                                                                                           AAX20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, disgnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrelia infections in animals, and for the production of blosynthetic products such as enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a movel isolated polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease resistance or its fragment having substantially the same activity as the full-length polypeptide. The polynucleotide of the invention is useful for conferring resistance or colerance to a plant pathogen. The present sequence represents a gene conferring disease resistance used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                        The invention comprises the amino acid and coding sequences of proteins involved in the control of flowering time in rice. The DNA and protein sequences of the invention are useful for modulating flower architecture and flowering time, the DNA and protein sequences are useful in the area of plant biotechnology, commercial plant farming and agriculture. The present wheat DNA sequence shows homology to the rice sequences of the

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 14; SBQ ID NO 14316; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid ministry promoter operably linked to the mucleic acid.

(2) a vector comprising a promoter operably linked to the mucleic acid.

(3) an isolated of the fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide of its fragment whose expression is inhibited by the activity of the polypeptide; (5) producting the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies pathway in which a proliferation-required gene or its gene product lies overawpressed; (7) antibition of an organism acts; (9) amanufacturing an antibion: (10) profiling the extent to which each of the strains as present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational dung discovery programs, or for screening for homologous mucleic acids required for proliferation in cells other. than S; aureus, S. typhimurium, C. prokaryotic sessential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in cells other and the sequence of an expansion of the printed specification; but was obtained in cells other the sequence of the printed specification.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a prococer operably linked to the nucleic acid inhibites proliferation of the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide of its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation of the polypeptide for proliferation, or that inhibits cellular proliferation of an activity a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiological proliferation of an organism acts; (9) manufacturing an antibiological proliferation of an organism and acts; (10) proliferation of an organism; or (11) identifying the target of a compound that inhibits the proliferation of an organism. The atrients of a compound that inhibits the proliferation of an organism. The arisense nucleic acids are useful for dentifying proteins or acreeming for homologous nucleic acids are useful for dentifying proteins or acreeming for homologous mucleic acids are sequired for proliferation in cells other than 8, aureus, 8, typhimutim, cequired for proliferation in cells other than 8, aureus, 8, typhimutim, 8, present than 8, aureus, 8, typhimutim, 8, present than 8, aureus, 8, typhimutim, 8, present than 8, aureus, 8, typhimutim, 8, the present sequence is one of the target Claim 14; SEQ ID NO 14254; 1766pp; English.

The activity of polynucleotides of the invention may be described as, vincerary, neuroprotective, immunochilator, cytostatic and anti-inflammatory, compositions comprising nucleic acids of the invention are upsetul for treating a mammalian subject, or as nutritional sources or supplements. These are useful in subject, or as nutritional sources or supplements. There is a latenated in disease, Huntington's disease, amountable, burns or ulcers Alternats, autoimmune disorders, canner or inflammation. The nucleic acids and polypoptides are also useful in disgnostic and research methods. The sequences given in records ABG60788-ABG61213 represent polymucleotides of the invention. NoTE: The sequence data for this patent did not form part of the printed specification, but
                                                                                                                                                                                                                                 õ
prokaryotic essential genes. Note: The sequence data for this patent did
not form part of the printed specification, but was obtained in
electronic format directly from MIPO at

The biosensors are useful for the sensitive and selective detection of ions. The biosensors are useful in methods of detecting the presence of an ion, particularly metal ions such as lead. The biosensors may also be used to determine the concentration of a particular ion in a solution. The present sequence is a ribozyme which may be used as a biosensor of the invention

This sequence represents a polynuclectide of the invention. It was isolated from Helicobacter pylori and encodes a h.pylori GHPO protein. The polyneptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and attrophic gastritis, and peptic ulter diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection and
specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of protein holds the modulating compounds which bluds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This sequence encodes a selected interacting domain (SID), identified via protein-protein interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          infection, gastroduodenal disease; gastritis;

                                                                                                                                                                                                                           The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial procein may be used for treating or preventing ulcers in a human or animal. This sequence encodes a selected interacting domain (81D), identified via
                                                                                                                       New complexes of protein-protein interactions in Helicobacter pylori, useful for identifying modulating compounds for treating or preventing ulcers in mammals.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TITE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMMENT
individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the setimated size. The sequence may sized gaps filled with Ns to the setimated size. The sequence may axer and beyond the ends of the clone and there may be sequence contigs within a contigs scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome tablegun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                    Center: Baylor College of Medicine

SOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the comtigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           234801 bp DNA linear HTG 13-NOV-2002

Center project information
Center project name: GTAA
Center clone name: GT
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.bgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contigs scaffold'). Within each contigs-scaffold, individual sequence contigs are ordered and ordented, and separated by sixed gaps filled with Ns to the estimated size. The sequence contigs are ordered clone and there may be sequence contigs within a contigs-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genhank draft_data.html}.
NOTE: This is a "working draft' sequence. It currently consists of 5 contigs. The true order of the piaces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 162694: contig of 162694 bp in length 1695 162794: gap of unknown length 225625: contig of 62831 bp in length 256 235725: gap of unknown length 256 231341: contig of 5256 bp in length 342 231341: gap of unknown length 231740: gap of unknown length 231740: gap of unknown length 123740: gap of unknown length 1231740: contig of 2061 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /organism="Rattus norvegicus"
